

II. SPECIFICATION AMENDMENTS

Beginning at page 2, line 16, amend the following:

A multiple platform architecture data reporting system for managing attribute data in a document processing apparatus. ~~The system, embodied on a non-transitory computer readable medium in the document processing apparatus, comprises:~~ features a system manager; ~~stored on said non-transitory computer readable medium of said data processing apparatus, and at least one platform controller, stored on said non-transitory computer readable medium of said data processing apparatus, said controller coupled to the system manager, the~~ The system manager ~~configured to: collect~~ attribute data including copyright data pertaining to software from each platform controller; ~~recognizes~~ the copyright data in the attribute data; and ~~processes in a processor the copyright data into a list of copyright data for the system, and a~~ A user interface ~~connected to the system manager for displaying~~ displays the collected attribute data in the list to a user.

A method for managing attribute data in a document processing apparatus ~~comprises~~ features: a system controller in the document processing apparatus polling at least two platform controllers in the document processing apparatus for attribute data; ~~The~~ the system manager ~~collecting~~ collects the attribute data from the at least two platform controllers in response to the polling; and ~~displaying~~ displays the collected attribute data on a user display of the document processing apparatus for managing attribute data in the document processing apparatus.

A software copyright information managing system ~~embodied on a non-transitory computer readable medium for managing software copyright data in a document processing apparatus comprises~~ features: a system controller, and ~~stored on said non-transitory computer readable medium of said data processing apparatus, at least one platform controller, stored on said non-transitory computer readable medium of said data processing apparatus, said controller coupled to the system controller, the~~ The system controller being configured to ~~collect~~ collects the software copyright data stored on each platform controller; and a user interface ~~connected to the system controller for displaying~~ displays the software copyright data from ~~the~~ a memory to a user.
